

EXCLUSIVE PRODUCT FEATURES

We offer a robust line of proprietary features that will meet your needs in all areas of softening, conditioning and filtering.

WATER EFFICIENT TECHNOLOGY®

Program proportionate cycles to maximize savings on salt and water. You can add an alternate cycle to prevent hardness leak-through from low salting. The valve will also display how much it has saved.

Pair These Together...

...and see how much water and salt you save!

WRIPLI®

Our Wripli WiFi compatible systems provide you easy access to your water on the go. See current flow rates, past water usage, and alerts right on your mobile device or computer.

CRYSTAL-RIGHT™ MEDIA

CRYSTAL  RIGHT.

Reduce hardness, iron, and manganese in one pass. This multi-functioning media is like no other water treatment on the planet. It can also raise the pH of acidic waters if needed.

INCH WORM®

With our patented Inch Worm technology, our filtration systems that use a chamber of air to oxidize dissolved contaminants will operate smoothly and quietly. The air chamber is released slowly to prevent drain line thrashing and reduce noise while the system is operating.

CHLORINE GENERATOR/ SALT MONITOR

Both patented devices utilize the in-coming brine solution in unique ways. The chlorine generator creates free chlorine that cleans the tank during each regeneration. The salt monitor takes an accurate reading of the concentration to alert you when it is time to add more salt.

OZONE GENERATOR

The ozone generator uses the air already being drawn into an air-injected filter. It converts the oxygen into ozone before it travels into the tank and cleans it during every regeneration. Any unused ozone dissipates for an eco-friendly, chemical-free cleaning routine.
